

## GREEN WASTE MANAGEMENT

Contracting with Harvest can save your town money, and free up municipal personnel and equipment to concentrate on providing core services. Your municipality can leverage Harvest's specialized organics recycling equipment, become more efficient and productive, and even access our distribution and marketing matrix. Our site management program offers:

## WHAT HARVEST PROVIDES

- ALL REQUIRED SPECIALIZED EQUIPMENT
- PROFESSIONAL SITE STAFFING
- EXPERT SUPERVISION
- MATERIAL PROCESSING
- MARKETING ASSISTANCE

# SPECIALIZED EQUIPMENT

## Composting

From screens to process your compost or topsoil to organics recycling equipment complementing your fleet's capabilities, Harvest is a professional and reliable source for your needs. Two screens are available to rent from Harvest in Connecticut, with or without a wheel loader and operator.

Our McCloskey 621 Trommel Screen is set up for screening compost. It's ideal for relatively wet material, equipped with brushes that clean the screen cloth as it rotates. This machine's rotating stacking conveyor can stockpile up to 1800 cubic yards of material without having to move the screening plant.

## Topsoil and Aggregates

Our CEC Screen-it 512 deck screen is ideal for screening topsoil and aggregates. You can easily produce material sized the way you want using its two decks and screen cloth that is simple to change. We use the CEC to screen material containing larger rocks, or to produce finer materials.

We usually rent our wheel loaders with either a grinder or a screen and have also used them for loading out material. They are all well maintained and we provide experienced operators. Our loaders are equipped with interchangeable buckets. We have grapple buckets for moving yard waste, high-tip buckets for loading large trailers and standard buckets for screening.

## Wood Grinding

Use Harvest's professional wood grinding equipment as needed, to complement your town's capabilities. Leverage the efficiencies of reliable grinders and expert staff, brought right to your town's site. When the job is complete, Harvest can also remove ground wood chips from your site.

Our Morbark 1300 Tub Grinder is equipped with a Grapple so it can load itself. The 1300 can also be supplied along with a specially equipped wheel loader on request. Our Morbark 6600 is especially effective at double grinding to produce a decorative landscape mulch. A wheel loader is required, as the 6600 is not self-loading.

## Windrow Turning

Accelerate your compost process. It can be difficult to fully compost leaves before the next year's leaf collection starts. You can speed up the process with a windrow turner, which is much more efficient than wheel loaders at turning leaves. Harvest's turner processes more material in one hour than a large wheel loader can accomplish in an entire day.

Harvest's powerful Frontier Turner is available to process your material right at your site. Uniquely configured to be towed behind a tractor, finished compost is produced in just nine months with four turnings supplemented by interim turnings with a wheel loader.
